

5 Patent Claims

1. Microorganisms, characterized in that they are capable of utilizing the propionamide of the formula

VI

10 in the form of the racemate or of its optically active isomers as the sole nitrogen source, and enzyme extracts therefrom.

2. Microorganisms according to Claim 1 of the genus *Rhodococcus*, *Arthrobacter*, *Bacillus*, *Klebsiella*
15 or *Pseudomonas*.

3. Microorganisms according to Claim 2 of the species *Klebsiella oxytoca* PRS1 (DSM 11009), *Klebsiella oxytoca* PRS1K17 (DSM 11623), *Rhodococcus opacus* ID-622 (DSM 11344), *Arthrobacter ramosus* ID-620 (DSM 11350),
20 *Bacillus* sp. ID-621 (DSM 11351), *Klebsiella planticola* ID-624 (DSM 11354), *Klebsiella pneumoniae* ID-625 (DSM 11355) or of the species *Pseudomonas* sp. (DSM 11010) or their functionally equivalent variants and mutants.

4. Polypeptide having amidohydrolase activity and
25 capable of hydrolysing (R)-3,3,3-trifluoro-2-hydroxy-2-methylpropionamide of the formula

VI.

5. Polypeptide according to Claim 4, in which the
30 polypeptide embraces the amino acid sequence shown in SEQ ID No. 2 or a fragment thereof or a functionally equivalent derivative of this sequence or of this sequence fragment with deletions, substitutions, insertions, inversions, additions and/or exchanges of
35 amino acids.

- 5 6. DNA sequence encoding a polypeptide according
to any of Claims 4 or 5. 2 I
7. DNA sequence for the expression of a
polypeptide according to either of Claims 4 and 5 in a
host, comprising a DNA sequence selected from amongst 2 I
- 10 (a) DNA with the sequence shown in SEQ ID No. 1,
fragments thereof and sequences which are complementary
thereto, and also sequences derived from them which are
degenerated in the encoding regions due to the
variation of the genetic code; and
- 15 (b) DNA sequences which hybridize with the encoding
regions of the sequences defined under (a), or
fragments thereof.
8. DNA sequence according to Claim 6 or 7,
characterized by the restriction map as shown in Fig. 1 2 I
20 or functionally equivalent variants and mutants
thereof.
9. Recombinant DNA molecule or vector, containing
a DNA sequence according to any one of Claims 6 to 8. 2 I
10. Recombinant DNA molecule according to Claim 9,
viz. plasmid pPRS1b, pPRS7, pPRS4 or plasmid pPRS2a. 1
- 25 11. Microorganisms containing a recombinant DNA
molecule or a vector according to either of Claims 9 2 I
and 10.
12. Microorganisms according to Claim 11, selected
30 from amongst microorganisms of the genus Escherichia,
Pseudomonas, Comamonas, Acinetobacter, Rhizobium/
Agrobacterium, Rhizobium, Bacillus, Rhodococcus or
Agrobacterium.
13. Microorganism Escherichia coli DH5, containing
35 plasmid pPRS1b, pPRS2a, pPRS4 or plasmid pPRS7. 1 I
14. Microorganism Escherichia coli XL1-Blue MRF'®,
containing plasmid pPRS1b, pPRS2a, pPRS4 or plasmid 1 I
pPRS7.
15. Process for the preparation of (S)- or (R)-
40 3,3,3-trifluoro-2-hydroxy-2-methylpropionic acid of the
formulae 1 I
- 

5

and/or of (R)- or (S)-3,3,3-trifluoro-2-hydroxy-2-methylpropionamide of the formulae

10

comprising the conversion of the propionamide of the formula

15

into the compounds of the formulae I, II, VII or VIII by means of a microorganism according to Claims 1 to 3 or 11 to 13, enzyme extracts therefrom or by means of a polypeptide according to Claims 4 or 5, and, if appropriate, isolation of these compounds.

20

16. Process for the preparation of (R)-3,3,3-trifluoro-2-hydroxy-2-methylpropionic acid of the formula

25

I

- 5 and/or of (S)-3,3,3-trifluoro-2-hydroxy-2-methylpropionamide of the formula

VII

- 10 comprising the conversion of the propionamide of the formula

VI

- 15 into the compound of the formula II by means of a microorganism according to Claim 2 of the genus *Klebsiella*, by means of a microorganism according to Claims 11 to 14 or a polypeptide according to Claims 4 and 5, and, if appropriate, isolation of this compound
20 and/or of the compound of the formula VII formed during this conversion.

17. Process according to Claim 15 or 16, characterized in that the propionamide of the formula

2

VI

25

is prepared by converting, in a first step, trifluoroacetate of the formula

III

30

5

into trifluoroacetone of the formula

IV

- 10 using a mineral acid, converting the former, in the second step, into the propionitrile of the formula

V

- 15 using a cyanide, and converting the former, in the third step, into the propionamide of the formula

VI

- 20 either chemically using a concentrated mineral acid or microbiologically using mutated microorganisms of the genus *Rhodococcus*.

18. Process according to Claim 17, characterized in that the mineral acid used in the first and third step is sulphuric acid, phosphoric acid or nitric acid.

19. Process according to Claim 17 or 18, characterized in that the cyanide used in the second step is an alkali metal cyanide.

20. Process according to one of Claims 15 to 19, characterized in that the conversion of the propionamide of the formula

VI

5

is carried out using microorganisms of the genus Klebsiella, Rhodococcus, Arthrobacter, Bacillus, Escherichia, Comamonas, Acinetobacter, Rhizobium, Agrobacterium, Rhizobium/Agrobacterium or Pseudomonas.

21. Process according to any of Claims 15 to 20, characterized in that the (S)- or (R)-3,3,3-trifluoro-2-hydroxy-2-methylpropionamide of the formulae

15

VIII

is hydrolysed to the compound of the formula I or II, either chemically in the presence of a base or microbiologically using microorganisms of the genus Rhodococcus.

20

22. (R)-3,3,3-Trifluoro-2-hydroxy-2-methylpropionamide

I

23. (S)-3,3,3-Trifluoro-2-hydroxy-2-methylpropionamide.
